

## Tubes and Spin Filters

### Big Beating Tubes

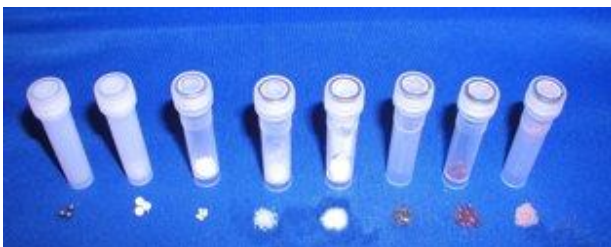

Bead beating is the most effective and versatile biological sample lysis method available. MO BIO offers you the ultimate flexibility when lysing and processing virtually any biological sample.

Choose from either optimized kits that employ the bead beating lysis method or individual Bead Tubes for designing your own sample disruption and lysis protocols.

### Precellys® 24 Homogenizer

The Precellys® 24 Homogenizer\* is a bench top sample preparation instrument dedicated to the highly effective grinding, lysis and homogenization of any biological sample. In as little as five seconds, this high capacity instrument simultaneously processes up to 24, 2 ml samples.

- High speed mechanical action delivers efficient and reliable homogeneous grinding in as little as five seconds.
- Process all sample types, including difficult samples such as pine needles, seeds, spores, fungal mats, bone and skin.
- Homogenize up to 24 simultaneous samples without risk cross-contamination
- Designed for fast and easy sample loading and cleaning.
- Qualified for use with our microbial, tissue, plant, fecal and soil nucleic isolation kits.

### Bead Beating Tubes

For rapid and reliable biological sample lysis from a wide variety of starting materials. Each pack contains 50 tubes.

Bead beating is the most effective and versatile biological sample lysis method available. MO BIO offers you the ultimate flexibility when lysing and processing virtually any biological sample.
