

Product Description

Peripheral Blood Mononuclear Cells (PBMCs) is any blood cell with a single nucleus [1]. PBMCs consist of lymphocytes (T, B and NK cells), monocytes and dendritic cells [2]. PBMCs are widely used in research fields including immunology, infectious diseases and hematological malignancies etc.

iXCells Biotechnologies provides high quality Bovine Peripheral Blood Mononuclear Cells (bPBMC), which are isolated from bovine peripheral blood and cryopreserved with >50 million cells in each vial.
