

SolisFAST® Probe qPCR Mix

Fast, highly sensitive and reproducible probe-based qPCR solution

Extremely fast and highly sensitive probe-based qPCR Mix that has been optimized for detection and quantification of up to five targets simultaneously

delivers qPCR results 2x faster (in as little as 30 minutes)

reliable quantification in up to 5-plex assays

consistent results with low- and high-copy targets

robust performance

30-day stability at room temperature

tolerant to common PCR inhibitors ([read more](#))

Description

SolisFAST® Probe qPCR Mix is a 5x-concentrated, ready-to-use solution for fast, highly sensitive and reproducible probe-based qPCR assays using dual-labeled hydrolysis probes (e.g. TaqMan® probes), and is suitable for detection and quantitation of up to five targets simultaneously.

Combining our novel *in silico*-designed SolisFAST® DNA Polymerase and optimized buffer, this mix offers robust qPCR, and accurate target detection combined with ice free shipping and reaction set-up

Properties

Concentration: 5x

Hot-start: yes, 3 minutes initial incubation at 95°C

Cycling speed: fast and ultra-fast

Detection type: Probe-based

Reference dye: Purple

Multiplex: up to 5 plexes simultaneously

Compatible real-time instruments: The mix is compatible with qPCR cyclers where Purple dye can be used as a passive reference signal for normalization of fluorescent signal.

Applications

DNA/LNA hydrolysis probe based assays
Detection and quantification of DNA and cDNA targets
Profiling gene expression
Microbial detection
Viral load determination

Excellent for multiplex assays

Accurate and sensitive qPCR

2x less time from samples to results

Mix Components:

SolisFAST® DNA Polymerase: *In silico*- designed analogue of Taq DNA polymerase with enhanced stability at room temperature, fast hot-start and faster extension rates compared to the wild-type Taq DNA polymerase.

qPCR buffer: Includes 15 mM MgCl₂ (1x PCR solution 3 mM MgCl₂), dNTPs (dATP, dCTP, dGTP, dTTP), additives that maximize efficiency of PCR

Reference dye: Purple dye is an internal passive reference dye used to normalize the fluorescent reporter signal generated in qPCR
