

SolisFAST® Probe qPCR Mix with UNG

Fast, highly sensitive and reproducible probe-based qPCR solution

Extremely fast and highly sensitive probe-based qPCR Mix that has been optimized for detection and quantification of up to five targets simultaneously

delivers qPCR results 2x faster (in as little as 30 minutes)

reliable quantification in up to 5-plex assays

consistent results with low- and high-copy targets

robust performance

contains dUTP and UNG to prevent cross-contamination

tolerant to common PCR inhibitors ([read more](#))

Description

SolisFAST® Probe qPCR Mix is a 5x-concentrated, ready-to-use solution for fast, highly sensitive and reproducible probe-based qPCR assays using dual-labeled hydrolysis probes (e.g. TaqMan® probes), and is suitable for detection and quantitation of up to five targets simultaneously.

Combining novel *in silico*-designed SolisFAST® DNA Polymerase with fast hot-start and optimized buffer, this qPCR Mix offers accurate target detection and quantification.

For extra convenience the mix includes dUTP and UNG enzyme that enable UNG treatment to prevent carryover contamination.

This master mix is developed for TaqMan® probes but is also suitable for other hydrolysis probe types.

Properties

Concentration: 5x

Hot-start: yes, 3 minutes initial incubation at 95°C

Cycling speed: fast or ultra-fast

Detection type: Probe-based

Reference dye: none

Multiplex: up to 5 plexes simultaneously

Compatible real-time instruments: The mix is compatible with qPCR cyclers that do not require an internal reference dye (e.g. ROX) for normalization of fluorescent signal.

Applications

DNA/LNA hydrolysis probe based assays
Detection and quantification of DNA and cDNA targets
Profiling gene expression
Microbial detection
Viral load determination

Accurate and sensitive qPCR

Mix Components:

SolisFAST[®] DNA Polymerase: *In silico*- designed analogue of Taq DNA polymerase with enhanced stability at room temperature, fast hot-start and faster extension rates compared to the wild-type Taq DNA polymerase.

qPCR buffer: Includes 16.5 mM MgCl₂ (1x PCR solution 3.3 mM MgCl₂), dNTPs (dATP, dCTP, dGTP, dUTP), UNG, additives that maximize efficiency of PCR

Excellent for multiplex assays

2x less time from samples to results
