

Product Data Sheet

Antigen blocking and stabilizing buffer for ELISA plates (bovine protein formulation) (for 10-20 plates)

Cat. No. 80064

Size: 100 ml

Storage: Store at 4°C

Antigen or antibody coating on ELISA plates is commonly used as the first step in ELISA. This is followed by the blocking of the excess protein binding sites in the microwell not occupied by the coated antigen/ antibody. Alpha Diagnostic International Blocking Buffer has been specially formulated to serve two important functions: to block the excess protein binding sites on ELISA plates and to stabilize the coated antigen or antibody on the plate. The ELISA plates blocked with this solution can be stored dried and then stored at 4°C for an extended period of time (1 year or more).

Form

The blocking buffer concentrate is formulated using mammalian protein and other proprietary stabilizing agents. It contains 0.02% merthiolate as preservative. **It should not be used in applications where BSA interferes with the assay.** A non-mammalian protein formulation is also available (#80065).

Recommended Use

After coating the antigens on the ELISA plates, wash once with an appropriate wash buffer and add 50-100 µl of solution per well and incubate plates for a minimum of 1 hr at room temp. Typically, antigens are coated in 50 ul or 100 ul volume. We recommend to use the same volume of blocking and stabilizing buffer as the coated antigen. After incubation, aspirate solution and air dry ELISA plates without washing. After drying, plates can be stored at 4°C in a sealed bag with desiccants.

The blocking buffer is most compatible with high protein binding ELISA plates (Cat. No. 80011). It is not recommended for other applications such as membrane blocking (Western blotting, etc.).

This material is sold for research purposes only and is not required to appear on the TSCA inventory. It is not intended for food, diagnostic, drug, household, agricultural or cosmetic use. Its use must be supervised by a technically qualified individual experienced in handling potentially hazardous chemicals.

This product is for in vitro research use only.
