**Mouse Anti-Human CD45-PE conjugate**

**PRODUCT INFORMATION**

**CLONE:** HI30  
**ISOTYPE:** Mouse IgG1, κ  
**WS.No.:** IV N816  
**Product Forms:** Purified, FITC conjugation, PE conjugation, PE-Cy5 conjugation.  
**SIZE:** 25 Tests

**DESCRIPTION**

CD45 McAb recognizes 180, 190, 205 and 220KD long single chain type I transmembrane glycoprotein called leukocyte common antigen (LCA). LCA is typically at high levels on all nucleated hematopoietic cells including bone marrow cells, thymocytes, lymphocytes, monocytes, granulocytes, but not on mature erythrocytes, platelets and non-hematopoietic tissues and cells. CD45 is critically required for T and B cell antigen receptor-mediated activation.

**PREPARATION**

The monoclonal antibody is purified from ascites by protein G affinity chromatography and is conjugated with FITC, R-PE, PE-Cy5 under optimum conditions.

**USAGE**

The purified reagent is effective for indirect immunofluorescence staining of human cells for flow cytometric analysis and is tested for immunohistochemical staining of acetone-fixed frozen sections and formalin-fixed paraffin sections.

The conjugated reagent (FITC, R-PE) is tested for flow cytometric analysis using 20µl/10<sup>6</sup> cells or 100µl peripheral blood cells.

The conjugated reagent (PE-Cy5) is tested for flow cytometric analysis using 10µl/10<sup>6</sup> cells or 100µl peripheral blood cells.

**STORAGE**

For purified forms, long term storage at -20°C.

For conjugated forms, storage at 4°C, should not be frozen and avoid prolonged exposure to light.
