

Product Specification Sheet

Citrate synthase, mitochondrial (CS/CISY) Antibodies

Cat. # CISY14-S	Mouse monoclonal Anti-Pig Cisy protein IgG, aff pure	SIZE: 100 ug
Cat. # CISY13-C	Pig heart Cisy protein semipure for Western	SIZE: 100 ul

The enzyme citrate synthase (E.C. 2.3.3.1 [previously 4.1.3.7]) is a pace-maker enzyme, as it controls the first committed step of the Krebs cycle, also called the citric acid cycle. Citrate synthase is localized within cells in the mitochondrial matrix, but is encoded by nuclear DNA rather than mitochondrial. It is synthesized using cytoplasmic ribosomes, then transported into the mitochondrial matrix. Citrate synthase is commonly used as a quantitative enzyme marker for the presence of intact mitochondria. Citrate synthase catalyzes the condensation reaction of the two-carbon acetate residue from acetyl coenzyme A and a molecule of four-carbon oxaloacetate to form the six-carbon citrate. Oxaloacetate will be regenerated after the completion of one round of the Krebs Cycle.

Human CS (chromosome 12p11-qter, 466-aa precursor, mature chain 28-466 aa) encodes a 466-amino acid protein with 95% homology to its pig homolog. CS enzyme, a homodimer, is located at the Mitochondrion matrix. Citrate synthase is found in nearly all cells capable of oxidative metabolism

Source of Antigen and Antibodies

Antigen	Pig (swine) heart purified protein
Ab Host/type	Mouse, monoclonal purified IgG (cat # CISY14-M)
2-ab	Goat Anti-mouse IgG-HRP conjugate Cat # 40320 (AP, biotin, FITC conjugates also available)
-ve control	Cat # 20008-1, Mouse (non-immune) Serum IgG, purified, suitable for ELISA, Western, IHC as -ve control

Pig citrate synthase protein was obtained from heart (semi pure ~85 Kda). For Western blot +ve control (**Cat # CISY13-C**) is supplied in SDS-PAGE sample buffer (reduced). Load 10 ul/lane of **CISY13-C** for good visibility with antibody Cat # **CISY13-S**. Store at -20oC in suitable size aliquots. SDS may crystallize in cold conditions. It should redissolve by warming before taking it from the stock. It should be heated once prior to loading on gels. If the product has been stored for several weeks, then it may be preferable to add 5 ul of fresh 2x sample buffer per 10 ul of the **CISY13-C** solution prior to heating and loading on gels. This preparation is not biologically active. It is not suitable for ELISA or other applications where native protein is required. Do not freeze, thaw, or heat repeatedly

Form & Storage of Antibodies/Peptide Control

Antiserum (unpurified)

100ul solution lyophilized powder
Supplied in Buffer: 0.05% azide
Reconstitute powder in 100 ul PBS

Storage

Short-term: unopened, undiluted liquid vials at -20OC and powder at 4oC or -20oC..

Long-term: at -20C or below in suitable aliquots after reconstitution. Do not freeze and thaw and store working, diluted solutions.

Stability: 6-12 months at -20oC or below.

Shipping: 4oC for solutions and room temp for powder

Recommended Usage

Western Blotting (1:1K-5K for neat serum and 1-10 ug/ml for affinity pure antibody using ECL technique).

ELISA: Control peptide can be used to coat ELISA plates at 1 ug/ml and detected with antibodies (1:10-50K for neat serum and 0.5-1 ug/ml for affinity pure).

Histochemistry & Immunofluorescence: Not tested.

Specificity & Cross-reactivity

This antibody is specific for citrate synthetase. It gives multiple bands in reduced blots of porcine citrate synthase, including a band at 85kDa. Antibody cross-reactivity in various species has not been studied.
