

Product Specification Sheet
Human Cardiac Myoglobin

□ **Cat #** MYG17-N-25 Myoglobin, Human Cardiac, purified protein **SIZE:** 25 ug

Myoglobin is a single-chain heme containing protein with a molecular weight of ~17kDa. It is the primary oxygen-carrying protein of muscle tissues. The same isoform is expressed in both cardiac and skeletal muscle. It is a sensitive biomarker for muscle injury and has been widely used as a marker of heart disease. Myoglobin is purified using a combination of gel-filtration and ion-exchange chromatography steps.

Source and Forms

Source: Human cardiac tissue, purified using proprietary methods.

Purity · 98% (SDS PAGE: Single 17 kDa band)

Concentration : 0.5 – 10 mg/ml See lot sp conc. on the vial.

Buffer: 50% Glycerol, 150 mM NaCl, 10 mM sodium phosphate, 0.05% NaN3 (pH 7.0)

Storage -20oC (do not store at lower temperatures)

Stability: 6-12 months at –20oC or below.

Recommended Usage

ELISA, Western
