

□ Cat. #ODN2336-1	ODN 2336- Type A human specific TLR9 Agonist, antigen grade	Size: 1 mg
□ Cat. #ODN2336-5	ODN 2336- Type A human specific TLR9 Agonist, antigen grade	Size: 5 mg
□ Cat. # ODN2336-1NC	ODN 2336- Type A human specific TLR9 Agonist (Negative Control), antigen grade	Size: 1 mg
□ Cat. # ODN2336-5NC	ODN 2336- Type A human specific TLR9 Agonist (Negative Control), antigen grade	Size: 5 mg
□ Cat. # ODN2336-F	ODN 2336- Type A human specific TLR9 Agonist FITC Conjugate, antigen grade	Size: 50 ug
□ Cat. # ODN2336-B	ODN 2336- Type A human specific TLR9 Agonist Biotin Conjugate, antigen grade	Size: 50 ug

CpG oligodeoxynucleotides (or CpG ODN) are short single-stranded synthetic DNA molecules that contain an unmethylated CG (Cytosine-guanine) di nucleotide in a specific base sequence (CpG motifs). The p refer to the phosphodiester backbone. These CpG motifs are not seen in eukaryotic DNA are considered pathogen-associated molecular patterns (PAMPs). The CpG PAMP is recognized by (TLR9). 3 types of, stimulatory ODNs have been identified based upon immunostimulatory activities.

Class A stimulate the production of large amounts of Type I interferons, induce the maturation of pDCs. They are also strong activators of NK cells through indirect cytokine signaling.

Class B ODN is strong stimulators of bovine/porcine B cell and monocyte maturation. They also stimulate the maturation of pDC but to a lesser extent than Class A ODN and very small amounts of IFN α .

Class C ODN combine features of both types A and B. They contain a complete phosphorothioate backbone and a CpG-containing palindromic motif. They induce strong IFN α production from DC and B cell stimulation.

ODN 2336 is a TLR9. Type A human specific TLR9 agonist.

Cat. #:ODN2336-1 & ODN2336-5

Sequence	5'-gggG <u>A</u> CGACGT <u>CGT</u> Ggggggg-3' (21 mer)
Purity	≥95%
Form and storage	Powder. After reconstitution, Store at -20C up to 1 year
Shipping	Shipped at 4° C
Endotoxin	<0.002 EU/μg
Solubility	water, PBS or other buffers (up to 5 mg/ml)

Notes:

- 1) Bases in capital are phosphodiester and those in lower case are phosphorothioate. Palindromic sequences are underlined.
- 2) Negative control Contains GpC nucleotides instead of CpG.

Cat. #:ODN2336-1NC & Cat. #:ODN2336-5NC (negative control)

Sequence	5'- gggGAGCAGCTGCTGgggggg -3' (21 mer)
Purity	≥95%
Form and Storage	Powder. After reconstitution, Store at -20C up to 1 year
Shipping	Shipped at 4° C
Endotoxin	<0.002 EU/μg
Solubility	water, PBS or other buffers (up to 5 mg/ml)

Cat. #:ODN2336-F, FITC Conjugate

Sequence	5'-gggG <u>A</u> CGACGT <u>CGT</u> Ggggggg-FITC (21 mer)
Purity	≥95%
Form and Storage	Powder. After reconstitution, Store at -20C up to 1 year
Shipping	Shipped at 4° C
Endotoxin	<0.002 EU/μg
Solubility	water, PBS or other buffers (up to 5 mg/ml)

Cat. #:ODN2336-B, Biotin Conjugate

Sequence	5'-gggG <u>A</u> CGACGT <u>CGT</u> Ggggggg-Biotin' (21 mer)
Purity	≥95%
Form and Storage	Powder. After reconstitution, Store at -20C up to 1 year
Shipping	Shipped at 4° C
Endotoxin	<0.002 EU/μg
Solubility	water, PBS or other buffers (up to 5 mg/ml)
