

PCR Primer for Carmovirus-Pelarspovirus

Part Number: PCR 94000/0025

The Carmovirus-Pelarspovirus Group PCR primers offer a sensitive diagnostic method to detect members of the Alphacarmovirus, Betacarmovirus, Gammacarmovirus, and Pelarspovirus genera of the Tombusviridae family. The primer sequences are based on conserved genome regions and can detect characterized and unassigned members of the Alphacarmovirus, Betacarmovirus, Gammacarmovirus, and Pelarspovirus genera.

This test can be used as an aid for identification of viral etiology of unknown plant diseases, test for known viruses when other tests are not available and

can be used to confirm results from other test methods.

This test may also detect members of the Tombusvirus and Dianthovirus genera.

The Carmovirus-Pelarspovirus Group PCR primer product includes a lyophilized mix of forward and reverse primers, PCR quality water and detailed instructions.

Disclaimer of License: This product is optimized for use in the Polymerase Chain Reaction (PCR) process covered by patents owned by Hoffmann-La Roche, Inc. and F. Hoffmann-La Roche Ltd. Purchase of this product does not include the license under these patents to use the PCR process. This product is recommended for use in conjunction with an authorized thermal cycler.

Includes:

- Lyophilized forward and reverse primers
- Sterile PCR quality water
- [User Guide](#)
