

Name	Ganirelix acetate
Cat #	PP-1280
Size	1 g, 10 g, 100, g and bulk custom packages
CAS#	129311-55-3
Mol. Mass	1690.42
Formula	C ₈₄ H ₁₂₁ CIN ₁₈ O ₁₇
Sequence	Acetyl-Ser-Tyr-Leu-Pro-NH ₂
Purity	>95%

Ganirelix Acetate (Antagon) is a gonadotropin releasing hormone with antagonistic (blocking) activity. It is indicated for the inhibition of premature LH (luteinizing hormone) surges in women undergoing controlled ovarian hyperstimulation.

Ganirelix acetate (or diacetate) is an injectable gonadotropin-releasing hormone antagonist (GnRH antagonist). It is primarily used in assisted reproduction to control ovulation. The drug works by blocking the action of GnRH upon the pituitary, thus rapidly suppressing the production and action of LH and FSH. It is administered as a daily subcutaneous injection
