

Cat # RP-445 Recombinant (yeast) Hepatitis B Surface Antigen ayw subtype (HBsAg), Saccharomyces **Size: 10 ug**

Introduction:

HBsAg is the surface antigen of the Hepatitis-B-Virus (HBV). The capsid of a virus has different surface proteins from the rest of the virus. The antigen is a protein that binds specifically on one of these surface proteins. It is commonly referred to as the Australian Antigen. Recombinant HbsAg ayw full length is a 24kDa protein cloned from HBV 320 genome.

Source:

Saccharomyces cerevisiae

Physical

Sterile Filtered clear solution.

Appearance:

Formulation:

Sterile Filtered solution containing 50% glycerol; 7.5 mM phosphate buffer pH 7.2 and 75mM NaCl.

Storage:

If supplied in powder then reconstitute it in 100 ul water for 1 mg/ml stock and store in liquid at 4°C for ~1 week or aliquots in suitable size and store at -20°C for long term storage

Stability:

HBsAg protein should be stored at 4°C between 3-4 weeks and for future use should be stored desiccated below -18°C

Purity:

Greater than 95.0% as determined by:(a) Analysis by RP-HPLC.
(b) Analysis by SDS-PAGE Coomassie staining.

Applications:

HBsAg protein was tested in ELISA with anti-HBsAg antibodies (capture and conjugate).
Immunochromatography (capture and conjugate).
Immunogen for monoclonal antibody production.

Usage:

This item is for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals
