

Cat # RP-531

Recombinant Hepatitis E Virus ORF3

Size: 100 ug

Hepatitis E virus (HEV), the major etiologic agent of enterically transmitted non-A, non-B hepatitis worldwide, is a spherical, non-enveloped, single stranded RNA virus that is approximately 32 to 34 nm in diameter. HEV belongs to a genus of HEV-like viruses (unassigned genus). HEV has a single-stranded polyadenylated RNA genome of approximately 8 kb. Based on its physicochemical properties it is presumed to be a calici-like virus.

Description:

The e.coli derived HEV protein is fused with beta-galactosidase at the N-Terminus and contains the HEV immunodominant ORF3 92-123 a.a.

HEV ORF3 protein was purified by proprietary chromatographic technique (.95%). Supplied in 20mM Tris-HCl, pH-8, 10mM B-ME and 8M urea. If supplied in powder then reconstitute it in 100 ul water for 1 mg/ml stock and store in liquid at 4oC for ~1 week or aliquots in suitable size and store at -20oC for long term storage

Storage:

HEV ORF3 protein is shipped at ambient temperature. Upon arrival, Store at -20°C. Stable for five years frozen. One month in solution at room temperature.

Specificity:

Immunoreactive with sera HEV-infected individuals.

Applications:

HEV ORF3 antigen is suitable for ELISA and Western blots, excellent antigen for detection of HEV with minimal specificity problems

Usage:

This item is for LABORATORY ESEARCH USE ONLY.
