

□ Cat # RP-775 Recombinant Human S100A4

Size: □ 2 ug

S100 belongs to the family of calcium binding proteins such as calmodulin and troponin C. S100A is composed of an alpha and beta chain whereas S100B is composed of two beta chains. S100 protein is also expressed in the antigen presenting cells such as the Langerhans cells in skin and interdigitating reticulum cells in the para cortex of lymph nodes.

Protein S100-A4 is a protein that in humans is encoded by the S100A4 gene. 100 genes include at least 13 members which are located as a cluster on chromosome 1q21. This protein may function in motility, invasion, and tubulin polymerization. Chromosomal rearrangements and altered expression of this gene have been implicated in tumor metastasis. Multiple alternatively spliced variants, encoding the same protein, have been identified.

S100A4 alternate names: Protein S100-A4, S100 calcium-binding protein A4, Metastasin, Protein Mts1, Placental calcium-binding protein, Calvasculin, S100A4, CAPL, MTS1, 42A, 18A2, FSP1, P9KA, PEL98.

Form & Storage

Human S100A4 recombinant full length human S100A4 protein expressed in E.coli as GST tag and purified (>95%). It is supplied 10µg/100µl (or see lot sp. conc on the vial) purified human S100A4 protein at 0.1 mg/ml in 50mM Tris-Acetate, pH7.5, 1mM EDTA, 20% Glycerol without BSA and Sodium Azide

Store vial at -20°C to -80°C. When stored at the recommended temperature, this protein is stable for 12 months. Please prevent freeze-thaw cycles.

APPLICATION AND SUGGESTED DILUTIONS:

ELISA · Inhibition Assays
Western Blotting

This item is for LABORATORY RESEARCH USE ONLY.
