

## Product Information Sheet

### K4751 Kanamycin Solution (100 mg/mL)

Synonyms: O-3-Amino-3-deoxy- $\alpha$ -D-glucopyranosyl-(1 $\rightarrow$ 6)-O-[6-amino-6-deoxy- $\alpha$ -D-glucopyranosyl-(1 $\rightarrow$ 4)]-2-deoxy-D-Streptomine Monosulfate

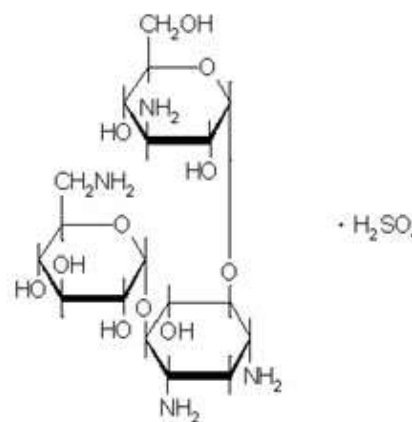

CAS: 25389-94-0

Formula: C<sub>18</sub>H<sub>36</sub>N<sub>4</sub>O<sub>11</sub> • H<sub>2</sub>SO<sub>4</sub>

Mol. Weight: 582.6

#### Properties

Form: Liquid  
 Appearance: Colorless, Clear Liquid  
 Application: Plant Tissue Culture Antibiotic  
 Solubility: Miscible with Water  
 Storage Temp: 2 to 6 °C  
 Other Notes: Plant Tissue Culture Tested

#### Application Notes

Kanamycin is an aminoglycoside antibiotic derived from *Streptomyces kanamyceticus*. Kanamycin has similar mode of action to those of gentamicin in which it inhibits protein synthesis and elicits miscoding by binding to the 30S subunit and sometimes the 50S subunit of the bacterial ribosome. Kanamycin is effective against Gram-positive and Gram-negative bacteria.<sup>2,3</sup> It has been reported that cross-resistance occurs between kanamycin and neomycin, framycetin, and paromomycin, and partial cross-resistance between kanamycin and streptomycin.<sup>2</sup>

It has been reported that the minimum inhibitory concentration (MIC) of kanamycin for *Staphylococcus aureus* is 3.5 mg/L and *Escherichia coli* is 4.5 mg/L.<sup>4</sup>

PhytoTechnology Laboratories® also carries kanamycin solution at 50 mg/mL (Product No. K586) and powder form of kanamycin monosulfate (Product No. K378).

Please Note: While PhytoTechnology Laboratories® tests each lot of this product with two or more plant cell/ tissue culture lines, it is the sole responsibility of the purchaser to determine the appropriateness of this product for the specific plants that are being cultured and applications that are being used.
