

### Product Information Sheet

O630

Oryzalin

Synonym: 4-(Dipropylamino)-3,5-dinitrobenzenesulfonamide

CAS: 19044-88-3

Formula: C<sub>12</sub>H<sub>18</sub>N<sub>4</sub>O<sub>6</sub>S

Molecular Wt: 346.36

#### Properties

Form: Powder

Appearance: Dark Orange Crystalline

Application: Plant Growth Regulator, Herbicide: Antimitotic Agent

Solubility: Very soluble in DMSO; solubility in water is approx. 2.6 mg/L

Typical Working  
Concentration: 5 – 300 µM

Storage Temp: Room Temperature

Storage Temp of  
Stock Solution: Suggest refrigeration for short-term; freeze for longer term. No solution

stability data has been reviewed.

Other Notes: Plant Tissue Culture Tested

#### Application Notes

Classified as a dinitroaniline herbicide, Oryzalin has been used to induce polyploidy *in vitro* for several orchid species (Miguel & Leonhardt, 2011), Rose (Kermani et al., 2003), Alocasia (Thao et al., 2003), *Miscanthus sinensis* (Petersen et al., 2003), Apple (Bouvier et al., 1994), Gerbera (Miyoshi & Asakura, 1996) and many others.

Oryzalin disrupts mitosis in the meristematic cells of seedlings by inhibiting microtubule formation via binding to plant tubulin to form a complex that is unable to polymerize into microtubules (Strachan & Hess, 1983; Morejohn et al., 1987).
