

Product Information Sheet

P687

Paclobutrazol

Synonyms: 1-*tert*-Butyl-2-(*p*-chlorobenzyl)-2-(1,2,4-triazol-1-yl)ethanol
 CAS: 76738-62-0
 Formula: C₁₅H₂₀ClN₃O
 Mol. Weight: 293.80

Properties

Form: Powder
 Appearance: White to Off-White
 Application: Plant Growth Regulator
 Solubility: DMSO
 Storage Temp: Room Temperature
 Typical Working Concentration: Varies by application. Concentration should be determined by end user.
 Other Notes: Plant Tissue Culture Tested; For Research Use Only

Application Notes

Paclobutrazol is known as a growth retardant containing an N-containing heterocycle. It functions by inhibiting cytochrome P450-dependent monooxygenases, which are enzymes that catalyze the oxidation of *ent*-kaurene into *ent*-kaurene acid, thus it inhibits the gibberellins biosynthesis which leads to the inhibition of internodes elongation.²

It has been reported that Paclobutrazol enhances tuberization of potato at any sucrose concentration.³ Paclobutrazol also aids in preventing seed germination. A treatment of silver maple seeds with 1 mM paclobutrazol has been shown to delay germination by 50%.⁴

Please Note: While *PhytoTechnology Laboratories*™ tests each lot of this product with two or more plant cell/ tissue culture lines, it is the sole responsibility of the purchaser to determine the appropriateness of this product for the specific plants that are being cultured and applications that are being used.
